## ALPHA-TAPE® DESIGN ALLIANCE WITH SCHATTDDECOR

As an international trendsetter and specialist for innovative surface solutions, Schattdecor presents a clear answer to the challenges of our time with "The Art of Tomorrow". The modern, minimalist decor selection creates a sense of confidence and direction in a world full of possibilities and information. With

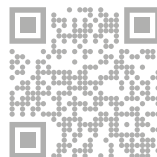

unique decor papers, Schattdecor consciously focuses on reduction and precision – and therefore stands by its claim to simplify complexity and set new standards in interior design.

With our ALPHA-TAPE® edgebanding, we offer the perfect complement to the current decors and colors of Schattdecor. As a leading surface specialist, Schattdecor prints and finishes paper, PP, PET and PVC to create modern, technical and decorative surfaces for furniture and flooring. With our edgebanding, we guarantee a seamless finish for the latest decors.

## ALPHA-TAPE® DESIGN ALLIANCE WITH INTERPRINT

With the BEYOND EDITION Interprint goes far beyond classic trend updates. Instead of following short-term fashions, the concept opens up new perspectives for interior design – visionary, sustainable and inspired by nature, society, materials, technology and the future. The BEYOND EDITION combines craftsmanship with innovation, relies on co-creation and creates

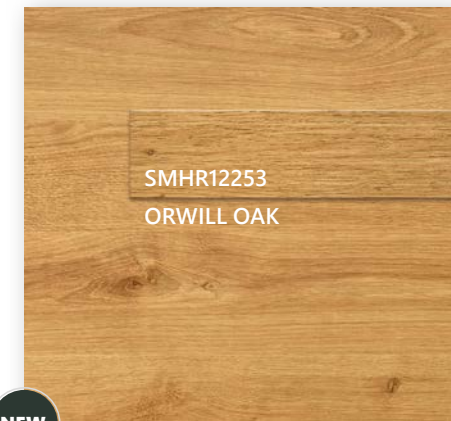

decors that tell stories: organic like nature, conscious like our society, lively like aged materials, limitless like technology and visionary like the future. This is how surfaces are created that not only design rooms, but also shape living environments – authentic, full of character and unique.

What really completes a piece of furniture is the right edgeband for the surface. ALPHA-TAPE® edgebanding seamlessly complements Interprint's high-quality decors and creates a harmonious overall look in which design, color and texture fit together perfectly. The results are furniture pieces with a high-quality

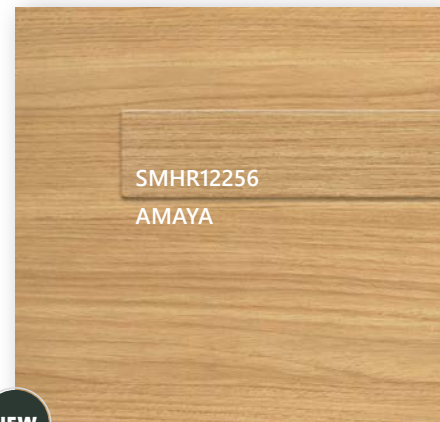

character – aesthetic, durable and with great attention to detail. Finished and perfectly matched ALPHA-TAPE® edges – ready for you to order now.

## ALPHA-TAPE® DESIGN ALLIANCE WITH CONTINENTAL

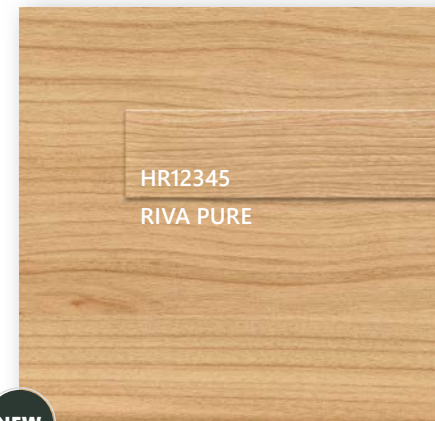

Continental is enhancing its surface designs with three new decors that cover very different styles and still complement each other perfectly. Wright Walnut stands for a warm, natural wood look. Ideal for creating comfort and natural aesthetics in living spaces. Riva Pure stands for clean lines and minimalism – a decor that is reduced and elegant without being intrusive. Otranto sets accents with character. Whether slightly

rustic, mediterranean or with a distinctive texture, this decor attracts attention. These new designs can be combined very well, for example in furniture, wall coverings or other interior solutions. For this, we offer the already matched ALPHA-TAPE® edgebanding.

## DESIGNS FROM GRUPPO FRATI

Gruppo Frati is one of Italy's leading manufacturers of wood-based panel products for the furniture industry. The "Tailoring Division" of the company places great emphasis on the quality consistency of its products and on continuous design and style research, supported by the valuable assistance of experienced professionals in the fields of architecture, design

and color. At the SICAM, Gruppo Frati is presenting the new concept "DISCOVER", which is called "A new exhibition of IDEAS projected towards the future" and bringing together three projects that feature significant stylistic and technological innovations.

## DESIGNS FROM RENOLIT

RENOLIT ALKORCELL is a decorative PP-based film for surface design applications. This versatile film is easy to process using flat lamination or post-forming techniques. Thanks to a unique combination of printing and embossing technologies, the films give an attractive tactile finish and are available in natural-looking woodgrains or eye-catching abstract designs.

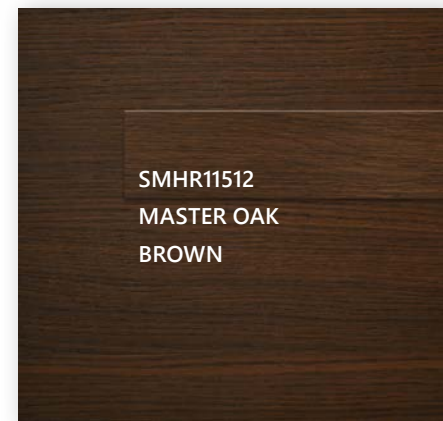

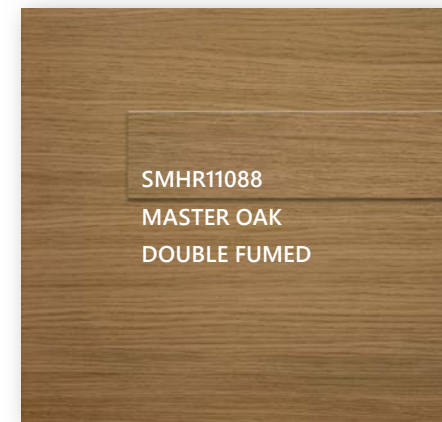

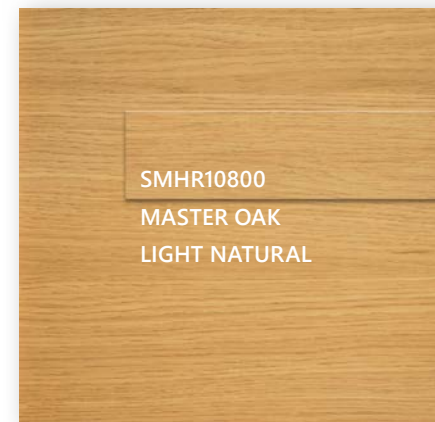

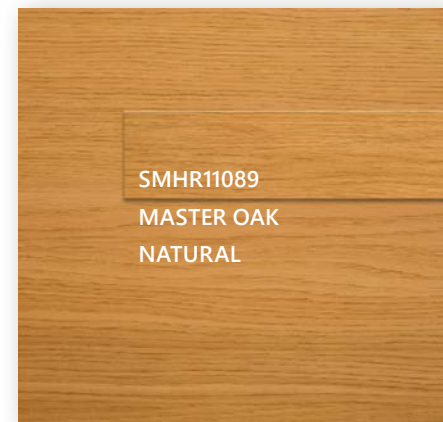

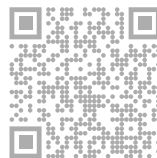

"In the beginning there is an idea – for a piece of furniture, a shop interior design, a caravan or ceiling panels. An image inspired by imagination and creativity." RENOLIT realizes such visions with a big variety of décors and colors whether contemporary, classic or rustic; high gloss or low lustre matt.

## ALPHA-TAPE® STOCK PROGRAM MASTER OAK

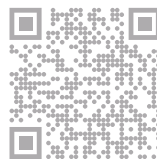

With the aim of developing a sustainable alternative to real oak wood, the panel manufacturer Unilin Panels created the Master Oak product range – a modern and environmentally friendly decorative surface with natural charm. Master Oak combines the unique and natural look and feel of real oak with the quality of melamine and laminate. We present our ALPHA-TAPE® ABS and ALPHA-TAPE ZERO® PP edges in the same color and texture for the first six Master Oak designs. Our SOFT MATT finish offers identical surface properties such as high scratch resistance and colour fastness. It is also particularly dirt-repellent, easy to maintain and clean. Give your furniture a uniquely natural look – with ALPHA-TAPE® edgebanding for all-round perfect furniture.

Thanks to the strong resemblance to real oak wood, which is made possible by the patented Timber Touch Technology, Master Oak is winning customers worldwide. We are pleased to present our perfectly matching ALPHA-TAPE® ABS and ALPHA-TAPE ZERO® PP edgebands for the next six Master Oak designs. Take your project to the next level. Combine light, color and depth in different ways thanks to the subtle tonal shades, from natural oak hues to soft greige and deep green.

## ALPHA-TAPE® STOCK PROGRAM SENSATION

Swiss Krono has developed a sustainable design concept with its **sensation** collection. The Synchro-Wood technology gives surfaces an authentic look and feel by combining visual and haptic qualities. To match this, we offer our ALPHA-TAPE® ABS edgebanding in same colors and textures, matched to all 9 decors based on oak, alder

and elm. Our edges create a harmonious look and their realistic texture emphasizes the natural character of the surfaces. The Soft Matt finish impresses with its matte look, scratch resistance, color fastness, dirt-repellent surface and easy cleaning. With ALPHA-TAPE® you get the perfect edge for the **sensation** collection.

## ALPHA-TAPE® DIGITAL EDGE

Our digitally printed edges offer an impressively authentic print image. We achieve a natural look thanks to the extended repeat and the deceptively realistic reproduction of the decor. At the same time, our digital printing makes it possible to reproduce decors with an outstanding depth effect. Thanks to special processing techniques and maximum colour consistency, the decors are always reproduced in consistent quality.

Our digital printing can be combined with all MKT finishes and offers endless possibilities.

### AVAILABILITY

Our digital edge is available in PP and ABS. We offer thicknesses from 0.4 to 3.2 mm and widths from 16 to 405 mm as well as various embossings.

## SPECIAL APPLICATIONS

Our diverse ALPHA-TAPE® range also includes innovative solutions for a wide variety of special applications. Whether for softforming, zero-joint technologies, multilayer construction or lightweight honeycomb panels, each edgeband can be optimally adapted to the respective area of application, resulting in a high-quality product. Our research & development department is constantly working on new products and creating innovative concepts to make our edges even better and more versatile.

### ALPHA-TAPE® FLAME-PROOF

Our ALPHA-TAPE® FLAME-PROOF ABS offers reliable fire protection and meets strict European standards. Thanks to its self-extinguishing properties, this edgeband ensures that in the event of a fire, it will not spread the fire once, if the ignition source is removed. Manufactured from through-dyed ABS, it combines a decorative narrow surface coating with excellent impact resistance, workability, design versatility and heat resistance. Thanks to its halogen-free flame retardant, it is ideal for wall coverings and furniture. It is available in widths from 12 mm to 405 mm and in thicknesses from 0.4 mm to 3.2 mm.

### ALPHA-TAPE ZERO®

ALPHA-TAPE ZERO® is our innovative edgeband, which can be applied with all currently available zero-joint technologies without any specific modification required. It bonds permanently and seamlessly with the panel material and guarantees quality, durability and a flawless overall appearance. Also available for PP honeycomb panels and furniture with very tight radii.

### ALPHA-TAPE® FLEXIBLE

With ALPHA-TAPE® FLEXIBLE, we have developed an extremely resilient and highly flexible edgeband that can be formed in two dimensions, similar to a wrapping foil. It is suitable for various softforming applications such as doors, grips or molded furniture parts and offers a wide freedom of design with different shapes of edging solutions without breaking or causing unsightly bending discoloration (stress whitening).

## STOPGAP STARTER KIT

For sealing edgebands in fully automatic production lines we have developed our STOPGAP STARTER KIT. This complete system consists of our highly effective hydrophobing agent and a mature hardware. We have perfectly optimized the

system under production conditions and have already defined the presets for quick and simple commissioning.

STOPGAP STARTER KIT is installed as the last unit on the machine. Thanks to the spraying system, the water-repellent agent can be applied to the desired glued joint using fine precision nozzles. The treated parts can then be processed immediately and are protected against the penetration of dirt, water and steam in the long term. Increase the quality and durability of your furniture and pass on tangible added value to your customers.

## MKT GOES GREEN

To enhance our sustainability, we develop future-orientated strategies and products for an environmentally friendly production. We use natural raw materials and constantly increase the recycled content in our ALPHA-TAPE® edges. With ALPHA-TAPE® PP REC, we already offer a sustainable edgebanding solution

with a significant amount of PCR (Post-Consumer-Recycled) material, which has the same impressive design, quality and processing as our conventional ALPHA-TAPE® PP edges. Our energy management system, a central part of our 'green' culture, aims to reduce energy losses and increase energy efficiency along the value

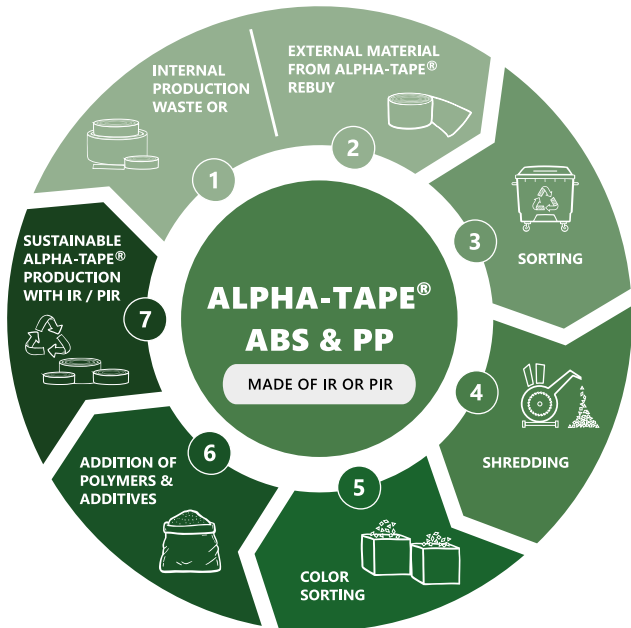

chain. In this way, we reduce greenhouse gas emissions and actively contribute to environmental protection.

ISO  
CERTIFIED  
ACCORDING TO  
DIN EN ISO  
50001:2018

# OUR SUSTAINABLE ALPHA-TAPE®

For the production of our ALPHA-TAPE® PP REC, we use high-quality PCR (Post-Consumer-Recycled) material from safe sources with consistently high quality. For ALPHA-TAPE® ABS and PP edges, we use IR or PIR (Post-Industrial-Recycled) material, which we recycle from production waste and/or our ALPHA-TAPE® REBUY program.

# OUR RAW MATERIALS

We are constantly developing new processes and products to make our production even more environmentally friendly for

the future. And we support the idea of a sustainable circular economy and lead by example.

## PP The better choice for our future

Our customers benefit from the high environmental compatibility and recyclability of PP as well as many other positive material and processing characteristics: PP is low in stress whitening and has a smaller specific weight. Besides it is very resistant to UV light and chemicals.

## WPC Sustainable and particularly natural

WPC is made from PP and small wood particles or fibres, cellulose and additives. Edgebands made of WPC are perfect for wood decors to create a more natural radius. It is highly recyclable, environmentally friendly and can be processed in the same way as PP.

## PCR Sustainable edge banding made from PP

With our sustainable ALPHA-TAPE® PP REC, we have developed a product that consists of more than 50% post-consumer recyclates and is in no way inferior to a classic PP edgeband in terms of design, quality and processing.

## PIR Maximum reuse of internal recyclates

Wherever possible, we use high-quality recyclates from our internal recycling process in the production of our ALPHA-TAPE® edges. This saves fossil resources and reduces our ecological footprint.

## ALPHA-TAPE® REBUY

Leftover stock that unnecessarily takes up storage capacity due to stockpiling, order cancellations or collection changes can be returned to us. Since 2021, we have been offering ALPHA-TAPE® REBUY, a buyback program for sustainable recycling of unused material. After prior analysis, we buy back remaining stocks of our ALPHA-

TAPE® edges, recycle them into pure recyclate and use it for the production of new ALPHA-TAPE® edgebands. ALPHA-TAPE® REBUY offers numerous advantages for customers who want to reduce their ecological footprint. By optimising the raw material cycle, the service life of our edgebands is extended, which contributes

to the sustainable use of resources. Instead of disposing of excess material through thermal processes, our buyback program reduces waste and significantly lowers CO<sub>2</sub> emissions. In addition, customers can reduce their disposal and storage costs, free up storage capacity and utilise it more efficiently.

1

### PRODUCTION OF ALPHA-TAPE®

We use a mixture of virgin material and recycled material based on ABS and PP for the production of our ALPHA-TAPE® edgebanding.

2

### TRANSPORT TO CUSTOMER

We package our ALPHA-TAPE® edges and deliver them to customers worldwide, where they are further processed into a wide range of products for the furniture industry.

3

### NOTIFICATION OF UNUSED GOODS

Unused ALPHA-TAPE® ABS and PP edges can be returned to us in their original packaging for a financial benefit. For this purpose, the customer contacts our service department and after confirmation, a provisional refund is determined and the return is authorised.

4

### TRANSPORT TO MKT

The goods registered for repurchase are packed by the customer and returned to us.

5

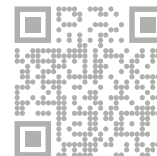

### MATERIAL ANALYSIS & RECYCLING

Our quality assurance department checks the condition of the material and its recyclability. If the return conditions are met, a credit note is issued. The material is then sorted, processed, shredded into pure recyclate and reintegrated into the production of new ALPHA-TAPE® edges.
